

engitech[®]

Engineering Compounds for Automotive Applications

- As a market leader in compounds the research of innovative materials is in our genes. With our High – Tech compounds we develop solutions that are making vehicles lighter & safer. Intelligent lightweight construction with outstanding material properties, reducing both material consumptions and CO₂ emissions.
- ENGITECH[®] grades are specially designed to cater automotive industry with it's high quality that are optimized for
 - Lightweight construction
 - Excellent thermal stability
 - Excellent scratch, heat and weathering resistance
 - Better flowability and easy to process with optimum cycle time
 - Good dimensional stability

- We are passionate about the automotive industry and are eager to understand the trends and new application requirements driving market dynamics. This way, we help our customers ensure that they maintain a competitive advantage.
- ENGITECH[®] offers an entire range of product lines such as PP, ABS, PA6, PA66, PBT, etc and alloys like PC/ABS, PA/ABS, PC/PBT and others to successfully meet the requirements of ever evolving automotive market.
